

Crowd-Control Barriers

Multi-purpose security barriers for high-traffic events

Material	galvanized steel piping
Dimensions	6.56 ft x 3.61 ft (2 m x 1.1 m)
Weight	approx. 31.00 kg (68 lbs)
Transport	25 barriers per rack 11 racks (approx. 550.00 m/1,804 ft overall length) per standard trailer

Applications

eps crowd-control barriers are ideal for securing admission areas at concerts, sporting events, street festivals, and other high-traffic gatherings. They can also be used to fence in entrance areas, section off booths, or create spectator areas to safeguard against potentially dangerous crowd surges.

Features

These sturdy interlocking units snap together quickly and easily and are compatible with our security gates. They are also virtually tip proof as the flat platform base turns into a heavy ballast when spectators stand on it.

Optional Extras

Upon request, we offer delivery, installation, and breakdown. A variety of specialized sizes and shapes are available.

Crowd-Control Barriers

On-site applications

Crowd-control barriers configured to control the flow of foot traffic

The admissions waiting area, Hurricane Festival, Scheessel, Germany

Crowd-control barriers at a corporate event

Security for both audience and equipment

A security access path between audience pens at an open-air show
